Office hours: email for appointment

Module Description

How can we identify differences between party systems, determine party positions, and measure public opinion? Do parties keep their promises or are politicians “pledge breakers”? Are promises in certain policy areas more likely to be fulfilled? In what policy areas do parties differ in terms of their positions and issue emphasis? And do parties respond to changes in public opinion?

In this module, we first discuss the main functions of political parties, outline features of representative democracies, and identify ways of measuring public opinion. Next, we assess whether parties keep their promises, whether the “mandate model of democracy” is a desirable and realistic mode of political representation, and how existing studies on election pledge fulfilment can be improved. Afterwards, we investigate parties’ willingness and capacity to respond to changes in public opinion. Fourth, we discuss different approaches of measuring party positions, political ideology, and the salience of policy areas. Based on these methodological approaches, we identify the circumstances under which parties change their positions and issue emphasis. Finally, we briefly discuss alternative types of political participation that go beyond representative government and electoral democracy.

Learning Outcomes

1. Extensive knowledge of central theories of representation, the mandate model of democracy, and party competition

2. Detailed insights into past and current approaches to study questions about pledge fulfilment, party positions, responsiveness and issue ownership
3. Critical reading and discussing complex academic literature and diverse quantitative and qualitative methodological approaches

Indicative Module Content

The following topics will be covered in this course: parties and party systems; the “mandate model of democracy”; measuring and aggregating public opinion; economic voting; the cost of governing; responsiveness; party competition; party positions, salience, and issue ownership; deliberative and direct democracy

Approaches to Teaching and Learning

- Active and task-based learning
- Group work and discussions
- In-class debates
- Problem-based learning

Overview of Assessment

- 1,000 word response paper: 30%
- 2,500–3,000 word essay from a choice set of questions: 70%

Expectations and Guidelines

- Students are expected to read the papers or chapters assigned under **mandatory readings**. These readings serve as the basis for in-class discussions about the advantages, disadvantages, and applicability of the various approaches to social science questions.
- Students are required to submit one **response paper** (1,000 words) throughout the course, which counts towards 30% of the grade. By Week 3, everyone will have been assigned a week where they will prepare a response paper. Response papers must be submitted via [Brightspace](#) no later than **Monday, 9am of the respective week**, meaning that the assignment has to be submitted *before* the texts are discussed in class. Students are required to choose *one* of the required or suggested readings for that week (readings marked with a star may not be used). Response papers must contain the following two aspects:
 1. Identify either a limitation of the paper (e.g., how a variable is measured, or an unreasonable/unnecessary assumption) or a possible extension. Either way you should have only one argument in these papers.
 2. Suggest a possible solution to that limitation or describe how you would carry out the extension. Note that what you propose should be feasible (ideally by you). If, for example, you find the author’s data weak, then you should identify better data, or at least propose a plausible way of collecting these data. If you think the method is wrong, explain why and suggest a

better one. If the conclusions do not follow from the premises, discuss what conclusions are actually supported. A specific course of action should be outlined. This process might help you down the line in finding a dissertation topic. I am not interested in a summary of the paper. The idea is for you to try out ideas for future research projects.

- Students submit an **essay** which counts towards 70% of the final grade. The essay must not exceed 2,500–3,000 words (including bibliography, captions, and footnotes) and will tackle one of the ‘discussion questions’ which will be published in due course. For this essay, you are required to (i) draw on academic literature (articles and/or books) and (ii) properly cite the academic literature you use to prepare your essay. You should attach an *alphabetised* bibliography to your essay. Students should read beyond the reading list for this essay. The essay must be submitted via [Brightspace](#) as a PDF document before **24 April 2020 (8:00pm CET)**. More information on the essay will be provided in the seminar. For information on academic writing, I recommend the following sources:

- Patrick Dunleavy (2014). *How to Write Paragraphs in Research Texts (Articles, Books and PhDs)*. URL: <https://medium.com/advice-and-help-in-authoring-a-phd-or-non-fiction/how-to-write-paragraphs-80781e2f3054>.
- Stephen B. Heard (2016). *The Scientist’s Guide to Writing: How to Write More Easily and Effectively Throughout Your Scientific Career*. Princeton: Princeton University Press.

For the essay, I recommend to pay special attention to the following aspects:

- *Focus on argumentation, demonstrate critical thinking:* Your essay will be judged primarily on your ability to make nuanced arguments and to demonstrate your understanding of the nuances of the arguments presented by the authors discussed in the course and readings that go beyond the syllabus. While you are expected to engage with the material in the course during your essay, a good essay will do so in a creative way where your own voice comes through clearly. This can be done by critically commenting on the arguments of others; creatively combining arguments from others to make a case; and/or presenting your own original arguments in attempting to improve upon shortcomings in the literature that you have identified.
- *Read deeply, read widely:* Reading deeply is the most important thing for developing your essay. But you should also read widely, consulting sources both within and beyond the syllabus. It is possible to write a great paper by focusing on just a small number of sources. But this is rare enough. As a rule of thumb, well-researched papers usually average between one and two distinct references per double-spaced page. For a 2,500- 3000-word essay, this will amount to approximately 10–15 distinct references to texts that you have read and analysed closely.
- *Presentation:* Be attentive to the presentation of your essay, including consistent referencing-style (with page numbers provided), a bibliography, and a consistent layout. Learning how to deliver well-presented and polished-looking work is part of your undergraduate training and a highly transferable skill. Take it seriously. Poor presentation will result in lost marks. If you require information on proper citation style, please refer to the guidelines of the American Political Science Association:

Plagiarism is an issue we take very serious here in UCD. Please familiarize yourself with the definition of plagiarism on UCD’s website and make sure not to engage in it.

Late Submission Policy

All written work must be submitted on or before the due dates. Students will lose one point of a grade for work up to 5 working days late ($B-$ becomes $C+$). Students will lose two grade points for work between 5 and 10 working days late ($B-$ becomes C). When more than two weeks are necessary, the student will need to apply for extenuating circumstances application via the SPIRe Programme Office.

Introductory Readings

The seminar does not build on a single text book, but relies mostly on papers and chapters of books. For a general overview of the course content, I recommend the following books:

- G. Bingham Powell (2000). *Elections as Instruments of Democracy: Majoritarian and Proportional Visions*. New Haven: Yale University Press.
- Russell J. Dalton, David M. Farrell, and Ian McAllister (2011). *Political Parties and the Democratic Linkage: How Parties Organize Democracy*. New York: Oxford University Press.
- Giovanni Sartori ([1976] 2005). *Parties and Party Systems: A Framework for Analysis*. Essex: ECPR Press.
- Elin Naurin, Terry J. Royed, and Robert Thomson, eds. (2019). *Party Mandates and Democracy: Making, Breaking, and Keeping Election Pledges in Twelve Countries*. Ann Arbor: University of Michigan Press.
- Peter Mair (2013). *Ruling the Void: The Hollowing of Western Democracy*. London: Verso.

Technical Background and Prerequisites

The course requires knowledge of general approaches and theories of political science. The following books provide very good introductions to research design and applied quantitative methods.

Research Design and Quantitative Methods

- Paul M. Kellstedt and Guy D. Whitten (2019). *The Fundamentals of Political Science Research*. 3rd edition. Cambridge: Cambridge University Press.
- Kosuke Imai (2017). *Quantitative Social Science: An Introduction*. Princeton: Princeton University Press.

Syllabus Modification Rights

I reserve the right to reasonably alter the elements of the syllabus at any time by adjusting the reading list to keep pace with the course schedule. Moreover, I may change the content of specific sessions depending on the participants' prior knowledge and research interests.

Course Structure
